Cinnabar separates solid solutions formed by reactions between cinnabar and phlogopite at high pressures and high water pressures.

In the earth's upper mantle, cinnabar separates at pressures and possible presence of phlogopite.

Cinnabar separates solid solutions formed by reactions between cinnabar and phlogopite at high pressures and high water pressures.

Cinnabar separates solid solutions formed by reactions between cinnabar and phlogopite at high pressures and high water pressures.

Determination of liquidus relations in synthetic silicate systems with electron probe analysis. 2015, I970.
